Parrotkit Deploy Checkout and Tracking QA Report

Test time: 2026-03-09 19:34:40 KST

Target URL: https://parrotkit-deploy.vercel.app/

Branch / commit: dev / b1008a9

Summary

Login to the deployed app succeeded with the shared smoke account.

Pricing page rendered correctly and GTM loaded on the deployed page.

Both view_pricing and begin_checkout were pushed into dataLayer.

Checkout did not open because the deployed client did not send a variant ID.

GA4 and Meta Pixel outbound requests were not observed in the tested flow.

Primary findings

1. Checkout blocker: POST /api/checkout returned 500 from the deployed site after clicking Get Access Now.
2. Root cause evidence: a direct authenticated browser fetch returned 400 with the message Product variant ID is required.
3. Tracking status: the GTM container script loaded, but no GA4 collection or Meta Pixel network requests were observed.

Technical evidence

Network log confirmed GTM base load: https://www.googletagmanager.com/gtm.js?id=GTM-WNHB8L5J (200).

Browser evaluation confirmed dataLayer contained view_pricing and begin_checkout events with auth_user_id and ecommerce metadata.

Browser evaluation also showed the deployed client bundle had no usable NEXT_PUBLIC_VARIANT_PRO value at runtime.

Meta Pixel (facebook/connect.facebook/tr endpoints) and GA4 (google-analytics/g/collect endpoints) were not observed.

Recommended next actions

1. Set NEXT_PUBLIC_VARIANT_PRO in Vercel Production and redeploy the production branch.
2. Repeat the pricing flow and confirm Lemon checkout opens successfully.
3. Publish GTM after adding GA4 Configuration and Meta Pixel tags and triggers.
4. Re-run the same smoke and verify outbound requests to GA4 and Meta endpoints.
